

PRESS RELEASE

Subject: Launch of the Semmelweis Scanner

Location: IPS Exhibition and Conference, Manchester Grand Central
Stand 14, RDI HAND IN SCAN

Date: 18th September 2017

Background:

The Semmelweis Scanner is an automatic hand hygiene checker that allows health professionals ensure that their hand hygiene technique is correct.

The Semmelweis scanner gives instant visual objective feedback each time it is used - it also has an automated online reporting facility.

The Semmelweis Scanner is ideal for training and controlling hand rubbing.

The Semmelweis Scanner is a great example of how technology can induce a positive behavioural change.

About: HAND IN SCAN

The Semmelweis Scanner was developed by Hand-in-Scan Ltd., a Hungarian company, and called after Ignaz Semmelweis who 170 years ago discovered the importance of hand hygiene. The Hand-in-Scan Semmelweis Scanner is already part of the medical education at various institutions, including the Semmelweis University, where medical students cannot pass their courses without passing the Semmelweis hand rub Trainer device.

HAI is one of the greatest challenges of the modern healthcare system. It results in 1.4m cases a day globally, leading to a quarter of a million unnecessary deaths a year in the developed countries. Western hospitals still have around 10% average HAI ratio, leading to hundreds of billions of Euro annual loss - despite all governmental campaigns and global educational programs.

Distributed in Ireland and UK by: RDI Systems Ltd

About: RDI Systems Ltd
